PERSONAL STATEMENT

I build AI systems that **work** — not just in notebooks, but **in production**. With **Python, AWS**, and hands-on experience in **NLP, deep learning, and LLM integration**, I focus on solutions that are **practical**, scalable, and **maintainable**. I hold myself to **high standards**, learn fast, and take **ownership** of what I ship.

I thrive in **technically rigorous environments**, stay curious about emerging technologies, and bring the same **discipline and precision** to every project I take on.

SKILL

- **Programming Languages:** Python (Selenium, Pandas, NumPy), JavaScript (Next.js, Node.js, TypeScript), PHP, SQL.
- **AI & Machine Learning:** LLM Integration (OpenAI API, Gemini API, Anthropic API), TensorFlow, Keras, Hugging Face (basic), Sentiment Analysis, AI Model Training & Deployment, RAG (basic)
- **Frameworks & Tools:** Flask, Next.js, Express.js, TailwindCSS, n8n, Microsoft Power Automate, Web Scraping
- **Databases:** MongoDB, DynamoDB, MySQL, PostgreSQL, Microsoft SQL Server
- **Cloud & DevOps:** AWS (Bedrock, Lambda, S3, DynamoDB, IAM), Docker, GitHub, GitHub Actions
- **Automation:** n8n, Make.com, Python Scripting, Telegram Bot API
- **Knowledge Management:** Knowledge Base Design, Data Curation, Intent Mapping, SOP Documentation, Data Cleaning & Standardization

WORK EXPERIENCE

Backend Developer & IT Support

May 2025 - May 2026

Hung Hiep Huy Co., Ltd

- Resolved **15+ backend issues** via Python monitoring scripts, cutting system downtime by **30% across 4 departments**
- Designed a structured **Google Account management system** to automate review workflows across **3 restaurant brands**, reducing manual operations by 50%
- **Optimized internal data workflows** and reporting pipelines, improving data accuracy and reducing processing time for cross-functional teams
- Managed database operations via **cPanel and phpMyAdmin**, ensuring data consistency during large-scale website upgrade projects
- Supported **data collection, cleaning, and reporting tasks** in collaboration with internal teams and junior members

Tech Stack: Python, REST API, MySQL, Google Workspace API, Workflow Automation

Web Developer

Aug 2024 - Jan 2025

My Hanh Seafood

- Built a **real-time Python bot** to collect Instagram check-in data and send automated notifications through **Telegram Bot API**, **reducing** marketing team's manual **tracking time significantly**
- Rebuilt **3 WordPress backend modules** to automate form data capture and DB sync, cutting manual entry time **by 40%**
- **Automated** repetitive data **workflows** to improve marketing team efficiency and reduce human error in data processing

- Applied systematic **debugging** and **optimization techniques** to improve website stability and performance under production load

Tech Stack: Python, Selenium, Telegram Bot API, WordPress, REST API, Automation Workflow

Marketing Automation Specialist

Jan 2024 - Jul 2024

Moc Seafood Restaurant

- Developed a **Python-based NLP pipeline** to collect, clean, and analyze Korean tourist reviews from multiple online platforms, extracting actionable insights for management
- Applied **sentiment analysis and text classification** models to categorize customer feedback by topic and sentiment, enabling data-driven decisions on service improvement
- Built a **Telegram Bot** integrated with automated notification workflows, delivering real-time alerts and operational reports to management
- Designed a **Power Automate workflow** to classify and route booking data, reducing manual processing errors and improving operational efficiency
- Processed and cleaned large volumes of unstructured **customer review data** for analytics pipelines and internal reporting

Tech Stack: Python, Selenium, BeautifulSoup, Power Automate, Telegram Bot API, Data Processing

Intern Data Engineer

Mar 2023 - Jun 2023

TravelThru

- Developed **Python bots to collect and update structured travel data** from multiple websites
- Organized and standardized **10,000+ travel data** records in MongoDB, building a structured knowledge base for automated reporting pipelines
- Designed and automated **ETL workflows** using Power Automate, reducing manual data processing time for internal teams
- Collaborated with cross-functional teams to improve **data pipeline architecture** and workflow efficiency

Tech Stack: Python, MongoDB, Selenium, ETL Pipeline, Workflow Automation

PROJECT

Restaurant Booking Chatbot — Amazon Bedrock Agent

Role: Data Engineer | **Team Size:** 1 (individual project)

Project Description:

A serverless chatbot system built with **Amazon Bedrock**, designed to handle restaurant information and reservations. The system integrates knowledge bases with restaurant menus and supports booking creation, retrieval, and cancellation.

Responsibility:

- Implemented chatbot logic using **Python** and **AWS SDK**, connecting Bedrock Agent with a knowledge base of restaurant menus.
- Built serverless APIs with **AWS Lambda** and **DynamoDB** to manage booking details and customer interactions.
- Automated resource provisioning with **Boto3**, configuring **IAM roles, policies, and database tables** for scalable deployment.
- Built and organized the restaurant knowledge base (menus, FAQs, booking policies) to work with RAG, helping the chatbot answer questions more accurately.

Technology Used:

Python (Boto3), Amazon Bedrock, AWS Lambda, DynamoDB, S3, OpenSearch, IAM

Hand Draw Object Detect — AI Drawing Recognition Platform

Role: Full-Stack Developer | **Team Size:** 1 (individual project)

Project Description:

A web app that **detects and classifies hand-drawn** digits in real-time. Users draw digits on a canvas, and the server processes the image to predict the digit using a pre-trained **CNN model**.

Responsibility:

- Built an interactive canvas for drawing digits with **HTML**, **CSS**, and **jQuery**, allowing users to adjust pen color and stroke width.
- Developed a **Flask backend** with routes for the homepage and a /recognize API, handling base64-encoded images from the client.
- Trained and integrated a **CNN model** on the MNIST dataset using **TensorFlow/Keras**, saved as an .h5 file for runtime loading.
- Implemented image preprocessing (resizing, grayscale, normalization) with **OpenCV** and **NumPy** for accurate predictions.

Technology Used:

Python (Flask, TensorFlow, Keras, OpenCV), NumPy, HTML/CSS, JavaScript (jQuery)

EDUCATION

VN–UK Institute for Research and Executive Education

Sep 2020 - Present

The University of Danang

- Specialization in **Data Science**.

CERTIFICATION

- Udemy: [Django Course](#)
- Coursera: [AI for Medicine Specialization](#)
- Coursera: [Natural Language Processing Specialization](#)
